Shagun Ravi Khemka

Senior / Lead Backend Engineer · AI Systems | Mumbai, India
shagun.khemka60@gmail.com | +91 9790024115 | linkedin.com/in/shagun-khemka/ | shagunkhemka.me

Senior backend engineer with **7+ years** building high-scale distributed and production LLM systems; at JioHotstar, drives subscription growth for **280M+ users** on a platform serving **50K RPS** at peak.

Technical Skills:

- **Distributed Systems & Infrastructure:** High-scale microservices, event-driven architecture, system design, REST API design, gRPC, performance optimization, capacity planning.
- **Data & Databases:** Relational (PostgreSQL, MySQL), NoSQL (DynamoDB, Google Spanner), Caching (Redis), Stream processing (Apache Kafka, Apache Flink).
- **Cloud & DevOps:** AWS/GCP, Kubernetes, Docker, CI/CD, Observability (Prometheus, Grafana), on-call rotations.
- **AI Engineering:** LLM model routing, eval harnesses, guardrails, structured outputs, prompt caching, cost/latency observability; agentic coding (Claude & Codex skills).
- **Languages:** Go (Golang), Python, Java, TypeScript.

Experience

JioHotstar – *Senior Software Engineer* - Backend - Bangalore, India **March 2024 - Present**

- Re-engineered legacy subscription/upgrade flows in Java (Spring Boot, JPA), decoupling purchase logic into a unified, extensible architecture that drove **~20% revenue growth** and **~40% higher paywall conversion** at 2,000 TPS peak. **(Recognised with Astral Team Award, Q4 FY25–26)**.
- Architected and led the Subscriptions Read P0 service serving all internal read APIs (token, entitlement checks for Identity and Playback) at **3M RPM peak (~50K RPS)**; held strict P99 SLAs while running **~20% fewer pods**, cutting infra cost with no perf regression.
- Led cross-functional migration of **14M+ users** from JioCinema to Disney+ Hotstar, keeping subscription state, payment reconciliation and entitlements consistent.
- Led a **SEV-1** at JioCinema where Akamai blocked **~200K** payment-gateway renewal webhooks, restoring ~**70K renewals** within **3 hours** by fixing a reconciliation cron calling the wrong status-check API.
- Helped build the JioCinema entitlement service serving user attributes to core services (Go, Spanner, Redis); team awarded **"Gangstar of the Quarter" (2024)**.
- Migrated a legacy Java service to AWS Graviton (ARM) + Java 21 for **~20% compute savings**, codifying the playbook into Claude and Codex agent skills for self-serve migrations across teams.
- Production on-call including IPL live events **(30M+ peak concurrency);** backend hiring panelist for LLD and HLD rounds (**20+ interviews)**; ran Go and Spanner knowledge-sharing sessions that got **three** teammates contributing independently.

FamPay (YC S19) – *Software Engineer - Backend* - Bangalore, India **June 2020 - March 2024**

- Joined as the **second** backend engineer and grew into leading a team of **four** owning the FamCard **microservice** (architecture, sprint planning, code reviews), scaling it to **5M+** virtual cards, **200K+** physical deliveries and **₹10M+** daily transaction volume while cutting card delivery costs by **20–30%**.
- Architected the gift card platform (**₹60 Cr+ cumulative GMV**) and built recharge and bill-payment products for **5M+ monthly transacting users**, together driving **~60%** of company monthly revenue.
- Conducted **30+ backend interviews**, onboarded new engineers and mentored **5+ interns** and juniors into full-time roles at FamPay and other leading tech companies.

Instamojo – *Software Engineer* - Backend - Bangalore, India **January 2019 - May 2020**

- Automated merchant onboarding (**~25%** fewer KYC resubmissions) and built reseller product ingestion that onboarded **~15K products** in its first month of beta; converted from **intern to full-time (PPO)**.

Education

VIT Vellore - Bachelor in Information Technology (CGPA - 8.32/10) 2015 - 2019

IIIT Bangalore - PG Diploma in Software Development (Blockchain) (CGPA - 3.73/4) 2019 - 2020
